SUMMARY

Software engineer with 3.5+ years shipping production AI systems across CRM, voice automation, mobile and analytics. I start from the business bottleneck, build the system that removes it, and measure the result.

EXPERIENCE

Software Engineer **Apr 2025 – Present**

AssetPlus *Chennai, India*

- Replaced manual first-contact tele-calling with a **Sarvam AI voice agent** driven by a CRM rules engine (call windows, 2-day retries, no Sunday calls), so **100% of new ad leads** get a first call and screening before a human dials.
- Raised call-recording upload reliability from **92% to 100% with zero duplicates** by re-engineering a rooted custom-ROM calling setup into a **root-free Flutter + Kotlin app** with an offline-first queue, idempotent upserts and hourly backfill.
- Cut app open time at 1,000 calls from **19.1 s to 3.9 s** by moving recording lookup off the UI thread into one batched native index, and added device-health alerts so ops know the moment a phone stops recording.
- Gave management a structured view of every sales call by building an **LLM call-QA pipeline** (Sarvam transcription + four Gemini prompts for summary, tags, scores and QA), with token and cost tracking and a Gemini-vs-OpenAI benchmark.
- Set up and own the company's **Frappe CRM end to end** (lead capture, AI prioritisation, Zoho sync, Google Calendar, WhatsApp and Slack alerts, Insights dashboards) and integrated the **Meta Conversions API** so ads optimise for real registrations, not form fills.
- Unified **6 marketing and business data sources** (GA4, Vimeo, Meta and Google Ads, Clarity, CRM deals) into a daily-refreshed management dashboard with Gemini AI insights, exposing **166 of 167** Google Ads leads arriving without campaign attribution.
- Built a public **Dify RAG assistant** with server-side key isolation, rate limiting and streaming, designed for **1,000+ users a day** on free-tier hosting.

Senior Full Stack Engineer **Dec 2022 – Mar 2025**

Makto Technology *Remote (UAE operations)*

- Cut operational costs by **40%** and lifted team productivity by **50%** by shipping 3 internal ERPNext apps, across **5+ ERPNext implementations** in CRM, fleet, healthcare and education.
- Delivered a **Flutter delivery platform** (customer and driver apps with Firebase, Stripe and live Google Maps tracking) plus a React admin panel and warehouse management system.
- Automated data collection by integrating LinkedIn and Google Forms with ERPNext, and set up Git-based CI/CD to improve deployment reliability.

PROJECTS & OPEN SOURCE

ai-knowhow | *Open source · Agent Skills · Python* github.com/VINOTH-RAJ-R/ai-knowhow

- Agent skills for Claude Code, Codex and ChatGPT: **modelwise** routes any prompt to the right model, effort and cost from a validated 61-model registry, and **retrace** turns finished AI work into reusable lessons. Being rolled out company-wide at AssetPlus.

llm-json | *Open source · Python* github.com/VINOTH-RAJ-R/llm-json

- Zero-dependency library that extracts JSON from malformed LLM output through staged repairs, and fails with the raw response attached so production errors are debuggable.

TECHNICAL SKILLS

Languages: Python, Dart, Kotlin, JavaScript, TypeScript, Java

AI & LLM: Sarvam AI, Gemini, OpenAI, Claude, Dify (RAG), prompt engineering, agent skills, LLM benchmarking

Frameworks: Frappe / ERPNext, Frappe CRM, Flutter, React, Next.js, Android services, Firebase

Data & Infra: MySQL, PostgreSQL, Redis, REST APIs, webhooks, GA4, Meta & Google Ads, GitHub Actions, Vercel, Git, Linux

Integrations: WhatsApp (WPPConnect), Zoho, Slack, Google Calendar, Meta Conversions API, Stripe, Google Maps

EDUCATION

Sona College of Technology **Jun 2022**

Bachelor of Information Technology · CGPA 7.64 *Salem, India*
